

## A HISTORY OF EXCELLENCE

Clayton Engineering was established in 1926 as a surveying firm. Today we employ professional engineers and surveyors, technicians, drafters and support personnel, enabling us to provide complete land surveying, planning and civil engineering services. Our principal area of operation is Eastern Missouri and Southern Illinois although we do have professional licenses in multiple states.

Our personnel have extensive experience. The current Principal has been with the firm for 30 years, providing continuity of management. Our staff of 35 includes eight engineers, all of which are licensed; most engineers enjoy multi-state registration. Our survey department has three Licensed Surveyors. One of our Professional Engineers is dual-registered as a Land Surveyor. We currently operate three survey crews which are equipped with the latest electronic surveying equipment (total stations and geographical positioning systems).

Clayton Engineering has been providing professional civil engineering and land surveying services to the public and private sectors for over 80 years.

These services include the following:

- Property Research
- Feasibility Studies
- Site Engineering
- Engineering Surveys
- Concept Plans
- Streets and Roads
- Boundary Surveys
- Zoning Assistance
- Sanitary Sewers & Treatment
- Topographic Surveys
- Flood Studies
- Water Systems
- Mapping•Stormwater Management
- Cost Estimates
- FEMA Map Revisions
- Forensic Surveying

- RESIDENTIAL
- RETAIL
- SURVEYING

## RETAIL

We understand the urgency of opening new facilities and reopening rehabilitated facilities. This understanding has offered us the opportunity to do not only rezoning and site development, but overall project coordination with all disciplines.

In addition to design, we are the local contact for many national clients for such tasks as building permit applications, health department approvals, etc., that are required for these fast pace, complex projects.

## PUBLIC WORKS

Our street and road improvement experience ranges from design of roadway geometrics to bridge hydraulics and layout. Storm sewer projects include design of storm sewer systems, culvert extensions and channel improvements.

Clayton Engineering also has significant experience in the design of municipal parks and recreation areas.

## RESIDENTIAL

Special residential development amenities for recent projects have included sewage treatment facilities, detention basins built in harmony with existing drainage or completely hidden underground, gated entrances, wetland abatements and floodplain reclamation, pumping stations and force mains.

Additionally, we have the experience you may need for re-zoning and municipal annexations.

## COMMERCIAL/INDUSTRIAL INSTITUTION/EDUCATION

In addition to the site development activities that accompany these projects (surveying, grading design, storm and sanitary design, roadway design), major improvements to offsite infrastructure are often required.

These may include railroad realignments, highway interchanges, and stream channelization design. Clayton Engineering's extensive experience in these areas gives us the ability to handle the technical as well as regulatory requirements these entail.

The site improvements have been for new campuses as well as building additions and site modifications and enhancements for many facilities throughout the St. Louis metropolitan area.

## SURVEYING

Clayton Engineering provides high accuracy control surveys, boundary surveying, expert testimony, topographic surveying, construction land surveying, legal descriptions and easement descriptions.

We utilize current technology to meet client's needs.
